

1 30 beam splitter

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

Edmund Optics" Cube Beamsplitters are available for optimal performance in the Visible or Infrared (IR) Spectrum, with anti-reflection coating options designed for popular laser wavelengths or wavelength ...

Thorlabs" non-polarizing beamsplitter cubes are offered here with broadband AR and beamsplitter coatings designed for 700 - 1100 nm.

Thorlabs offers non-polarizing cube beamsplitters for Visible (400 - 700 nm), NIR (700 - 1100 nm), and IR (1100 - 1600 nm) light. Beamsplitter cubes are available with split ratios of 10:90, 30:70, 50:50, ...

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in ...

The BS023 is a non-polarizing beamsplitter cube designed for use in the 700-1100nm wavelength range, available from Thorlabs. This beamsplitter cube features a 1-inch cube side, making it compatible ...

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems. Beamsplitters are also ideal for fluorescence ...

You can specify a 50/50, 70/30, or any custom split ratio, with optional polarizing or AR faces. Every splitter meets MIL-M-13508C requirements to ensure a long service life on the lab bench or in the ...

Beamsplitters operate by splitting light based on reflection/transmission (R/T) ratios or specific properties like polarization or wavelength. Available in cube and plate configurations, these versatile ...

A beam splitter (or beamsplitter, power splitter) is an optical device which can split an incident light beam (e.g. a laser beam) into two (or sometimes more) beams, which may or may not have the same ...
