

Beamsplitters are optical components used to split input light into two separate parts. Beamsplitters are common components in laser or illumination systems. Beamsplitters are also ideal for fluorescence ...

The beam splitter based on MMI coupling principle is a more mainstream beam splitting method in recent years. Compared with the above y-branch splitter, it is not limited by the radiation ...

Large beam size optical set up. Used in large beam size optical layouts. Used for monitoring optical systems, split beams into different wavelengths, polarizations or intensities.

Description: 632.8 nm BK7 Beam Splitter for Microscopy & Spectroscopy Applications

Shop DigiKey's large in-stock selection of Beamsplitters. View inventory, pricing and order now for same day shipping!

Beam splitters are used to split a single incoming light beam into two or more separate beams. We offer ZnSe beam splitters and glass beam splitters.

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

This beam splitters buying guide provides technical background, comparison of major types, selection criteria, and an overview of suppliers.

Thorlabs offers a wide range of optical beamsplitters. Our plate beamsplitters have a coated front surface that determines the beam splitting ratio while the back surface is wedged and AR coated in ...

We propose an ultra-short polarization beam splitter (PBS) consisting of two slot waveguides assisted by slotted waveguide subwavelength gratings (SWSWs), located between the two slotted waveguides.
