

## American EPON equipment is resistant to low temperatures

EPON Resin 828 is an undiluted liquid epoxy resin that is available in tank cars, tank trucks and 500 pound net closed head drums. EPON Resin 828 is normally shipped in bulk from 150 °F (66 °C) to ...

The dependence of yield stress on strain rate and temperature was reported, and time and temperature equivalences extended the range of the experiments to 10<sup>6</sup>s-1 at 100 C. In addition, the material was ...

Epoxy compounds based on EPON Resin 8111 possess unusually low exotherm temperatures in comparison to conventional epoxy systems of similar reactivity. This combination of high reactivity ...

These products are specifically designed to provide increased levels of thermal stability and chemical resistance, and are used in composites, structural adhesives, electronics / electrical and coating ...

Unfilled Epon 828 and GMB-filled Epon 828 epoxy were dynamically characterized with a Kolsky compression bar under lateral confinement at different strain rate and temperatures

We bring you processing advantages such as easy workability at room temperature with variable cure rates, and help you create products with special characteristics such as flexibility, good chemical and ...

Low temperature cure coatings allow applicators to extend the painting season into the fall and early winter months because coating application can continue even when the temperature falls ...

This work proposes a new method to improve the room-temperature curing speed and low-temperature resistance of epoxy adhesives. Starting from the epoxy resin system, a fast-curing, ...

**Introduction** This epoxy formulation is designed for those applications that require a chemically resistant clear coating that cures at low temperatures (40-50 °F).

**Chemical Resistance** Cured EPON Resin 828 is highly resistant to a broad range of chemicals, including caustic, acids, fuels and solvents. Chemically resistant reinforced structures and linings or coatings ...
