

The Chroma 58604-HD is specifically designed for laser diode burn-in and life testing, featuring high-density, multi-functional, and independently controlled modules.

The PRT-LASER provides low-cost, high-performance accelerated aging, burn-in testing, and qualification testing for laser diode reliability. It uses precise control, allowing the user to test up to ...

It explains why testing is essential at various stages, from development and manufacturing quality control to the burn-in process for eliminating early failures. The challenges of testing, such as ...

The resulting LIV curve reveals important clues about the quality of manufacture and the performance of the laser diode, enabling a pass/fail decision to be met. To test if all functional components are ...

Reliability test system for laser diode qualification in pulsed or CW regime 180 000 USD Select options

Chroma's photonics test solutions address mainly on automated test equipment for laser diode, VSCSEL, LED both in wafer and chip format as well as optical communication active components.

ST-LDC systems are fully configurable, all-in-one laser diode and LED ...

It explains why testing is essential at various stages, from development and manufacturing quality control to the burn-in process for eliminating early failures. ...

Chip-on-carrier and packaged laser diode burn-in tests are performed in rack-mounted, computer-controlled test platform that includes diode fixturing and all associated current-driver, temperature ...

ST-LDC systems are fully configurable, all-in-one laser diode and LED characterization devices for industries and R& D laboratories. They're designed to measure and analyze all major ...

This enables the user to form a streamlined, fully automated, Laser Diode verification process. These processes are, but not limited to, Chip/Wafer Qualification, Life-Test, Burn-In, Chip Characterization, ...

This laser diode reliability test system has been specially designed for the qualification and test of fiber-coupled devices with the maximum of internal and external measurement flexibility.
