

# Calculation of fiber optic grating filter bandwidth

Through numerical simulation and experiment investigation, a narrow-band output spectrum with 1064 nm center wavelength and 0.017 nm bandwidth is obtained. It may find a certain ...

In this paper we show how the bandwidth of long-period fiber-grating filters can be predicted simply and accurately. In addition, we demonstrate how fiber dispersion affects the filter characteristics more ...

Analytical expressions for the tunable bandwidth of such a filter are calculated and experimental data from a filter operating at 1064 nm with bandwidth range 30-90 pm is demonstrated.

As shown above, in the strong grating limit (i.e., for large  $\kappa$ ) the bandwidth depends on the grating strength, and not the grating length. This means the grating strength can be used to set the bandwidth.

The reflection bandwidth of a fiber grating, which is typically well below 1 nm, depends on both the length and the strength of the refractive index modulation.

Professional fiber Bragg grating calculator for FBG design and analysis. Calculate Bragg wavelength, reflection characteristics, and optimize FBG parameters for telecommunications, sensing, and laser ...

H. Jeong and K. Oh, "Enhancement of free spectral range of the resonance peaks in a long-period fiber grating by controlling material dispersion of cladding modes," *Opt. Commun.* 199, 103-110 2001 .

Abstract: coupled-mode equations, the formula of fiber grating is deduced in this paper. Numerical simulations and theoretical analysis of the effects of the tilt angle on bandwidth and maximum ...

We show that the transmission spectrum of the counter-propagating cladding mode assisted FBGs can be tailored by incorporating single or multiple phase shifts along the grating length.

In this model, it is proposed to use cascaded uniform Fiber Bragg Grating (UFBGs) with various lengths, a constant grating period, and a constant gap between FBGs.
