

In this blog we explore four-level pulse amplitude modulation (PAM4) with direct-detect and its role in 400G, and our next blog will introduce you to the exciting world of coherent optical ...

Coherent optical module refers to a typically hot-pluggable coherent optical transceiver that uses coherent modulation (BPSK / QPSK / QAM) rather than amplitude modulation (RZ/ NRZ / PAM4) and ...

Designed for next-generation 400G and 800G optical transceivers, this new CHR1065 product family combines outstanding performance with practical system-level advantages.

Discover the benefits, features, and applications of 100G PAM4 DWDM optical modules, and learn how they compare with coherent optics for modern network deployment.

To support this evolution, three modulation technologies have dominated discussions: NRZ, PAM4, and Coherent Optics. While NRZ and PAM4 are widely deployed in short-to-mid reach ...

Compare Coherent and PAM4 modulation for optical transceivers. Learn differences, applications, costs, and when to choose each for 400G networks.

Designed for next-generation 400G and 800G optical transceivers, this new CHR1065 product family combines outstanding performance with practical ...

When comparing PAM4 vs. coherent optical transceivers, it comes down to what features and benefits your network requires. In this post, we will analyze these two options to help your business make an ...

In this article, we will compare PAM4 and Coherent Optics in the context of 100G DWDM systems, exploring their features, advantages, and considerations to help determine which ...

What's the difference between coherent and PAM4 transmission technologies in the evolving landscape of 800G data centers? This article will provide you with the answer.

This report analyses the market for semiconductor IC chipsets used in optical transceivers, active cables, and related products. The chipsets include laser drivers, TIAs and in most cases, PAM4 or ...
