

# Cannot change the router's fiber optic interface

The router automatically changed its IP address to 10.0.0.1, as well as all the IP addresses that connect to it. This explains why I couldn't find anything on the network.

Despite multiple attempts, the Archer AX6000 v1.0 is unable to connect to the modem. The blue light on top of the router spins around for a few minutes as it tries to negotiate a connection ...

Originally I thought it was a problem with the fiber modem, and went down the rabbit hole with my ISP, but I eventually learned that I needed to only power cycle the nest router to fix it (temporarily).

This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications.

To prevent a loop or traffic forwarding failure caused by a MAC address conflict between a WAN interface and another interface, you can change the MAC address of the WAN interface.

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to ...

FortiGate models have specific ports dedicated to SFP/SFP+ and might not work if misused. Some ports are shared (for example, RJ45 and SFP combo); only one can be used at a ...

Learn how to troubleshoot fiber networks. Identify common issues like high loss, dirty connectors, and signal drops, with practical solutions for optical links.

However, setting up a fiber optic connection to your router can seem daunting if you're unfamiliar with the process. In this guide, we'll walk you through how to connect a fiber optic...

However, when I connect any of my GLiNet routers to the Optical Network Terminal (ONT), they do not recognize the signal. On the router GUI, it prompts me to select the protocol ...
