

When assessing the core switch connected to 13 edge switches and executing the "show arp" command, it reveals limited results for ARP entries connected to the core switch.

Are you specifically looking for an ARP table, and not the bridge ...

Triple check that the default gateway and subnet mask are set correctly on all these hosts, and the core switch. The core I3 switch may be using proxy arp which can hide these misconfigurations and cause ...

Connect to your Cisco switch via console, SSH, or telnet. The go-to command is show arp in privileged EXEC mode (enable first). For newer IOS versions, show ip arp may also work.

Are you specifically looking for an ARP table, and not the bridge MAC table? Most switches won't have anything more than 1 or 2 devices in their ARP table.

Solved: What is the Command to check arp table in nexus switch? For example - In catalyst switch if I type below command I will get mac-address of the IP Switch#sh arp | in ...

switch show interface configuration To display the configuration for all configured interfaces or a specific interface, use the switch show interface configuration command in privileged EXEC mode.

If there was an ARP response existing for the ARP request from the same IP address within the configured interval, the new request will be dropped. If the ARP response was not existing ...

You and I are mostly in agreement - the ARP table on a layer 2 switch is not a good way to find what is connected to the switch, and the best thing for determining what is connected to the ...

In this figure, you can find a Core Switch and two Access switches connected to it. There are two end devices PC0 and PC1 connected to Switch A and B respectively.

First try to resolve this issue, establish communication between the switch and the WLC - and you would see the arp entry for the WLC on the switch. Hope this helps.
