

Take a look at our test program to get the reliable and high-performance optical transceivers.

The transceiver consists of three sections: a DFB laser transmitter, a APD photodiode integrated with a trans-impedance preamplifier (TIA) and MCU control unit. All modules satisfy class I laser safety ...

Adopt advanced optical AGC control technique, the maximum AGC control range (adjustable) is -9~+2dBm RF amplifier part adopts the high-performance, low power consumption GaAs chip, ...

We offer a complete range of multi-coded optical transceivers and support all major form factors, modes, and speeds, including SFP, SFP28, QSFP, QSFP28, QSFP-DD, and OSFP, with data rates from 1G ...

These high-performance enterprise Ethernet switches offer a reliable, secure, and powerful solution for IT/OT convergence applications across multiple industries. These devices are designed to ...

SR1001 is a new-designed high-class CATV network optical receiver. optical receiver is the featured product that we specially designed for FTTH-Fiber to the Home network structure. With small shell, ...

The BPD1GA is an AC-coupled high-speed dual-balanced InGaAs photoreceiver. Due to its high transimpedance gain, its very low noise, and its bandwidth of 1 GHz, it is ideally suited for future ultra ...

These free-space, direct-illumination photoreceivers have been engineered to eliminate most common sources of noise and drift, and have enough gain to pick up even very weak signals making them ...

Prototypa is located in the Czech Republic, and we are happy to be their agent for customers located in the USA, Canada and Mexico. Their company is a complete solution source for all requirements ...

In this article, we'll explain the basics you need to know about 1G optical transceivers - from the types of transceivers available to the various features they offer.
