

The Pressurized Closure System 2-Type 505 is a complete, pressure-tight, re-enterable closure system for enclosing spliced connections of communications cable in a wide variety of applications.

The Pressurized Closure System 2-Type 505 is a complete, pressure-tight, re-enterable closure system for enclosing spliced connections of communications cable in a wide variety of ...

They have been widely used in the termination of fibre optic cables, such as fibre optic pigtail, fibre optic patch cables and so on. Different connectors and splice termination procedures are used for ...

A smaller-form-factor than the UCA series, this terminal closure can support subscriber drops or be used as consolidation point for multiple preterminated terminals in a star topology.

To tackle the variety of challenges service operators face when deploying fiber, CommScope has created a family of fiber optic splice closures that balance key criteria such as reliability, installability, ...

It is a fiber enclosure that is either watertight or breathable, aimed at protecting optical fiber splices and connectors coming from different outside plant cables and offers a full protection to the optical fiber.

We can use these two sets of data to narrow down the total list of possible cable and closure combinations. Once you have a smaller subset, you can then look at the details which are specific to ...

A smaller closure with higher density means it's easier to maximize available space when space is a premium. Our wedge-based sealing system with cable strain relief allows a cable to be installed into ...

Explore reliable optical fiber splice closures for network deployment. Our closures prioritize reliability, installability, and flexibility.

CommScope offers a wide portfolio of accessories for access terminals and splice closures for the outside plant access network.
