

Fiber Optic Cable Vibration Detection Alarm

The Vibration Fiber Optic Perimeter Alarm System is a high-precision intrusion detection solution used in critical infrastructure such as chemical storage facilities, refineries, and secured industrial zones.

By co-locating our sensor with data fibers, we can detect disturbances created when an intruder tries to tap or compromise the data cables with malicious intent or by accident. The perfect solution for ...

The system uses optical cables as sensing units, uses computers to collect and control data, and realizes long-distance and large-scale detection of perimeter defense areas.

We introduce a nondedicated bridge health monitoring (BHM) system that turns pre-existing telecommunication fiber-optic cables into distributed acoustic sensors to collect bridge ...

This paper aims to develop an optical fiber vibration identification system based on big data analysis to realize the real-time monitoring and data analysis of the running state of optical ...

The fiber optic cable becomes extremely sensitive to pressure and motion, capable of detecting minutes vibrations transmitted through the fence, soil or the surface.

Our solution is perfect for perimeter intrusion detection, especially over long distances. Once triggering vibration alarm, it can be linked to video review, enabling multi-dimensional perception and ...

Distributed fiber-optic vibration sensing technology is able to provide fully distributed vibration information along the entire fiber link, and thus external vibration signals from arbitrary point can be ...

To monitor for ground shifts and potential rupture points, an energy company installed optical fiber vibration sensors along a remote pipeline route. The system enabled real-time alerts on vibration ...

Our fiber optic intrusion detection system integrates collection, calculation and analysis, reduces data transmission time, improves the acquisition bit width, and achieves accurate restoration of on-site ...
