

Fiber optic switches enable IPTV and gigabit internet access

Once the aggregated traffic reaches the living room through the original line, I can use another switch (named S2) to separate the VLAN-tagged traffic and provide it to the router and the ...

GPON, or Gigabit Passive Optical Network, is a fiber-optic communication standard that delivers high-speed internet, voice, and video services over a single network.

The trick to get internet and IPTV over the same cable is to tag them again (or at least the IPTV). You'd need a router that has better support for vlans in order to do this.

This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications.

They have the following demands in this example. 1) The switches with XM60A are deployed in each region and connected to the GPON network. After registration, the switches should be able to ...
