

To define "galvanized" simply, it is the process of dipping iron or steel in a molten zinc bath. This creates a metallurgical bond between the metal and the zinc, creating a coating that protects the metal ...

Galvanizing is the protection of iron or steel against exposure to the atmosphere and consequent rusting by the application of a zinc coating. Properly applied, it may protect from ...

Galvanized steel is steel that has been coated with a protective layer of zinc to prevent corrosion and oxidation. The industrial material relies on a chemical and physical barrier to shield the ...

Galvanized steel is a type of steel that has been coated with a metallic layer to protect the base steel substrate from corrosion. Types of galvanized coatings include zinc (Zn), aluminum (Al), ...

Galvanization (also spelled galvanisation) is the process of applying a protective zinc coating to steel or iron, to prevent rusting. The most common method is hot-dip galvanizing, in which the parts are ...

The meaning of GALVANIZE is to subject to the action of an electric current especially for the purpose of stimulating physiologically. How to use galvanize in a sentence. Did you know?

If you're looking for galvanized, perforated, expanded sheet metal, or custom options, we stock the metal product options you need. Contact us to learn more, or request a quote today.

Learn about hot-dip, electro-galvanized, galvanized, continuously galvanized, and sherardized steel types, uses, and benefits.

Galvanizing, or galvanization, is a manufacturing process where a coating of zinc is applied to steel or iron to offer protection and prevent rusting. There are several galvanizing ...

Galvanized steel is a metal engineered for strength and rust resistance. Learn its process, properties, & why it's a top choice for tackling tough applications.
