

How to configure a multicast access switch

This document uses Huawei S7700 series switches as an example to describe how to configure both Layer 2 and Layer 3 multicast and provides analysis for common problems in the configuration.

How do I configure my managed switch with an external multicast router using the web interface?

Navigate to Switch > Configure > Routing and DHCP. Select or Add an interface. Enter Name, VLAN, Subnet, and Interface IP. Under Multicast routing, select Enable IGMP snooping querier. Click Save. ...

To use multicast mode in such an environment, you have to configure the MAC address tables of the network switches so that each port that connects to a hypervisor host uses a static entry ...

IP multicast routing is a method used in IP networks to efficiently deliver data from one source to multiple destinations simultaneously.

When a large network with several routers and switches are involved, the destination is a multicast group address from which data is sent to several receivers throughout the network.

This article will introduce how to configure MVR (Multicast VLAN Registration) on Omada Controller. MVR allows multicast traffic to be transmitted only once in a specified multicast VLAN and ...

In this article we look at the basics of Multicast and IGMP, and how to configure inter-VLAN multicast between two VLANs on a small core switch connected to multiple access switches.

The following are configuration frameworks we recommended for MVR to operate smoothly on Junos OS switches that support Enhanced Layer 2 Software (ELS) configuration style in single-tier or ...

UniFi Switch Settings let you configure how your network switches handle traffic, VLANs, port behavior, and Layer 3 isolation. These settings are critical for managing both basic Layer 2 switching and ...

This article will cover IP multicast concepts, starting from the basics and continuing on to discuss the different types of multicast forwarding path trees and multicast routing protocols.
