

# How to use the aggregation port on a switch

Learn how to use Link Aggregation between UniFi switches or clients to increase bandwidth and redundancy. Everything you need to know

In this tutorial you will learn how to Aggregate Unifi Switch Ports on your UniFi Controller 7.0. Link aggregation is a great way to increase speed and redundancy of your network.

Configuring port aggregation on a UniFi switch is straightforward using the UniFi Network Controller (or UniFi OS Console). The process involves selecting the ports you wish to combine, ...

Port aggregation can increase maximum throughput, and allow for network redundancy. It does this by splitting traffic across multiple ports instead of forcing clients to use a single uplink port on a switch.

Port aggregation is useful for implementing load balancing and provides a redundant link backup. To allow port aggregation, the basic configuration on all the ports must be consistent. The following list ...

I'm going to set up Link Aggregation between two gigabit switches: an 8 port Linksys SRW2008; and a 16 port Netgear GS716GT, shown in Figures 1 and 2 below. We covered both switches here a while ...

This guide covers link aggregation--what it is, why you need it, how to set it up, and key troubleshooting tips.

To aggregate multiple physical ports into a logical channel, you can use static aggregation or LACP protocol for negotiation.
