

Huawei SDH optical communication equipment

OSN 3500 is a new-generation optical transmission system developed by Huawei. It adopts a unified switching architecture and can function as an MPLS/MPLS-TP-based packet device or a TDM device.

The WAN PHY variant encapsulates Ethernet data using a lightweight SDH/SONET frame, so as to be compatible at a low level with equipment designed to carry SDH/SONET signals, whereas the LAN ...

OptiX OSN 1500 intelligent optical transmission system inherits all the features of the MSTP technology, maintaining compatibility with traditional SDH, MSTP network, financial SDH, PDH, Ethernet, WDM, ...

Instantly find the answers to all your questions about Huawei products and solutions. Looking to make a purchase? Leave your details and we'll be in touch.

OptiX OSN equipment can work in packet mode, TDM mode, or dual-domain (packet+TDM) mode. The three modes can be smoothly switched by upgrading the software of a service board so carriers" ...

A series of MS-OTN transmission equipment that supports TDM, packet, and OTN services over a metro or campus optical network, providing cost-effective transport solutions for power, medical, Storage ...

To meet the growing demands of Metropolitan Area Networks (MANs), Huawei has developed the OptiX OSN 3500--next-generation intelligent optical transmission system.

High Integration Flexible Networking Capacity Carrier-Class Protection Enterprise-Focused Features Intelligent ASON based Mesh network can against multi-node failures, improving network reliability by 10 times Built-in PCM for real All-in-One solution to access low speed services for enterprise customer Single-span transmission for a distance of 270km without a Raman amplifier, fewer REGs to reduce the network construction cost and facilitate the maintenance Intelligent ASON based Mesh network can against multi-node failures, improving network reliability by 10 times Built-in PCM for real All-in-One solution to access low speed services for enterprise customer Single-span transmission for a distance of 270km without a Raman amplifier, fewer REGs to reduce the network construction cost and facilitate the maintenance Specified 2M optical interface to support direct connection between MSTP equipment and relay protection device, lower risk and higher reliability See more New content will be added above the current area of focus upon selection See more on combasst Thunder-link Huawei SDH Equipment & Price - Thunder-link OptiX OSN equipment uses a universal switch architecture for unified grooming of packet services and TDM services. Committed to providing carrier and enterprise customers with ...

OptiX OSN equipment uses a universal switch architecture for unified grooming of packet services and TDM

Huawei SDH optical communication equipment

services. Committed to providing carrier and enterprise customers with high-performance ...

OptiX OSN equipment can work in packet mode, TDM mode, or dual-domain (packet+TDM) mode. The three modes can be smoothly switched by upgrading ...

Huawei OSN3500 (SDH intelligent optical transmission equipment) is a new generation of intelligent optical transmission equipment developed. It adopts a unified switching architecture and can be used ...
