

Intelligent Customization Process for Reconfigurable Optical Add-Drop Multiplexers for Security Applications

A reconfigurable optical add-drop multiplexer (ROADM) using special modal field redistribution is proposed and demonstrated to enable the selective access of any mode-/wavelength-channels.

An example reconfigurable optical add/drop multiplexer includes: optical fibers, X first wavelength selective switches, and Y wavelength add/drop modules. The X first wavelength selective...

A 96-channel silicon-based on-chip reconfigurable optical add-drop multiplexer (ROADM) is proposed and demonstrated for the first time to satisfy the demands ...

In this paper, we report on a novel scheme of mode-division ROADM with mode-selective silicon photonic MEMS (micro-electromechanical system) switches.

This document provides a comprehensive framework for the classification, characteristics, and operational parameters of Multi-Degree Reconfigurable Optical Add/Drop Multiplexers (MD ...

Discover the versatility of Reconfigurable Optical Add-Drop Multiplexers (ROADMs) in modern communication networks. Explore how ROADMs enable flexible routing of optical signals, ...

This study investigated the transformative impact of emerging technologies on the design and structure of optical network architectures, including spectrally efficient multicarrier systems and ...

In optical communication, a reconfigurable optical add-drop multiplexer (ROADM) is a form of optical add-drop multiplexer that adds the ability to remotely switch traffic from a wavelength-division ...

We designed a Reconfigurable Optical Add/Drop Multiplexer (ROADM) based on a sub carrier add/drop node in an optical communication system that is suitable for a

To summarize, we successfully demonstrated a mode-selective switch for TE₀ and TE₁, suitable for mode-selective ROADM applications. The TOPS-based switch allows independent phase shifts for ...
