

Is a home splitter allowed

Am I legally allowed to access my cable box to do this? I live in a house where a line comes in from the street via a large orange cable and my box is held closed by a twisty plastic thing ...

Earlier today RCN cable came to my home to setup my cable and internet. After searching for awhile, we came to the conclusion that the previous home owner has a splitter somewhere, we ...

California's year-old Green Lawn Care Law bans the sale of new gas-powered lawn care equipment. The legislation, which took effect Jan. 1, 2024, covers gas-powered string trimmers, lawn ...

Whether it's legal to raise a rooster in a residential area depends on where you live, which zone you're in, and what covenants apply to your neighborhood. For example, many city ordinances don't allow ...

In some regions, two internet-capable devices, such as a wireless gateway and modem, can be supported at the customer's request; however, they would be billed for two internet services ...

In general, avoid using splitters you don't need. It seems like you have enough splitters for at least 12 coax outlets. If those aren't all in use, consider disconnecting the cables that aren't in use ...

So, yes, you could just put the splitter back in and potentially give yourself and the upstairs neighbor both access... But every splitter you put in generally degrades signal strength... so it may not work well.

Effective Jan. 1, 2026, the 2025 state building codes have replaced the 2022 codes. The California Building Standards Commission updates the state building codes (California Code of Regulations, ...

It is possible you need a splitter to lower signal/raise return before your modem, however, the open port should be terminated. I would need to know your signal levels and what all ...

In general, avoid using splitters you don't need. It seems like you have enough splitters for at least 12 coax outlets. If those ...

Splitters have multiple uses, including connecting multiple devices to a single cable outlet. If you have a free outlet go ahead and try adjusting or removing it if you prefer.

I have ensured that the MoCA adapter outlet is connected to a MoCa compliant amplified splitter (supplied by Xfinity) that has a built-in PoE filter. Modem is connected to the same splitter, ...
