

GIGALIGHT's self-developed video optical fiber cables include HDMI and USB versions, featuring advantages such as lightweight, lossless transmission, long-distance capabilities, and high ...

The MCSW Series Multicast Fiber Optical Switches enable simultaneous connection of one input to all outputs without loss. They support fully non-blocking, conflict-free switching of any number of optical ...

This fiber optic modulator is a high switching speed module. It operates as a lossless optical isolation switch, a full-range variable optical attenuator (VOA), or an optical shutter.

LPO (Linear Pluggable Optics) transceivers lack full retiming (DSP) circuitry that is common in all prior generations of 400G, 800G and 1.6T optical modules. As a result, LPO relies on the host to handle ...

1:1 lossless transmission guarantees no packet loss in DCI scenarios in the event of a single fault or intermittent disconnection, ensuring that services and users remain unaware of any loss.

What Is a Fibre Channel Transceiver? A Fibre Channel (FC) transceiver is a specialized optical module designed to provide high-speed, lossless data transmission within Fibre Channel storage networks.

Credo's low-power optical DSPs enable 50G 1.6T PAM4 transceivers and active optical cables for cloud-scale data centers and AI networks.

Our monolithic design allows for high power in an ultra-small package with ultra-low power loss. This means layout and thermal design are simple and the device provides maximum efficiency, which is ...

Discover our optical zoom camera module with lossless zoom, capturing further, clearer. Ideal for drones, security surveillance, CCTV. Optical zoom camera ensure high-quality image at any distance.

Perfected over 15 years, it uniquely features a long delay of up to milliseconds, ultra-fast (nanoseconds) delay variation speed, and up to 25 bits of high resolution. Internally, the input optical signal ...
