

PDU output configurations must match the power input requirements of connected equipment while providing appropriate capacity and protection. Modern IT equipment utilizes several standard ...

LayerZero ePODs PDUs are engineered for reliability, monitoring, and maintainability. Each unit is designed for data centers and other high-availability facilities where power quality, uptime, and safe ...

PDU Transformers are custom-built for data centers--delivering efficient, low-noise, and high-performance power distribution where uptime is everything. From 500kVA to 1500kVA, each unit is ...

Increasing rack power density both in the data center and at the network edge means that reliable power distribution is crucial. Our innovative power distribution units and rack PDUs not only maintain power, ...

Larson Electronics provides reliable, high-density Power Distribution Units (PDUs) engineered for mission-critical data center environments.

Data center managers are faced with increasingly challenging demands: supplying additional computing power using less energy in a smaller space, while staying within budget constraints and maintaining ...

Achieve quieter operations in telecom and data centers by optimizing cabinet structure and sealing to block unwanted sound. Use advanced materials like high-density panels and ...

The evolution of PDUs reflects broader Data Center trends: from low-density setups (0-4 kW per rack) to extreme high-density environments (16+ kW per rack), driven by technologies like blade servers and ...

From that configuration we can offer either fixed output breakers or our innovative compartmentalized isolated distribution system. Perfect for safe, "live" circuit installs and maintenance.

They are capable of mounting vertically (0U) or horizontally (1U or 2U) in a data center/enterprise cabinet or rack using standard mounting buttons or included hardware.

With monitored and intelligent PDUs, data center teams can track energy trends over time, detect unusual spikes in consumption, and implement strategies to optimize cooling and reduce energy waste.
