

Measurement and Calculation of Single Optical Cable Reel

Calculate actual total cable weight and compare to Allowable Cable Weight shown.

The document provides information for calculating the capacity of a cable reel based on entered dimensions.

Cable Reel Capacity Calculator helps determine maximum cable capacity based on reel dimensions and cable diameter.

A) Flange Diameter Is The Cable Reel Total Size
B) Barrel Diameter Is The Size of The Drum CORE of The Reel
C) Traverse Is The Inner Width of The Cable Reel
D) Cable Diameter Is The Thickness of The Cable on The Reel
E) Edge Clearance Is The Height of Free-board
F) Maximum Reel Capacity
F) Recommended Reel Capacity
If the winding cable on a reel is done manually, the tightness of cable rolls and layers might differ. Thus, it is safer to give each cable reel a recommended capacity which is a rough estimate of 80 percent of its maximum capacity. In addition, have some space between the cable rolls and the flange edge is a healthy practice for keep the cable dam...

Calculate reel capacity by entering specifications of barrel, wire, traverse and fill dimensions, including perfect wind to determine reel guide.

To know how much wire or cable will fit on a shipping reel, enter the diameter of your cable in inches below. Our Reel Capacity Calculator will show how many feet or meters of that cable will fit on our ...

With our easy cable reel capacity calculator, you can calculate the maximum drum capacity or the length of a cable in a certain reel type by entering the reel (drum) dimensions and the diameter of the cable.

Note: Reel options are given for best fitting reels with clearances of at least 2 inches. Please call or email for inquiries involving twisted parallels or reels with more than 5 stacks.

Cable Diameter and Thickness: The calculator requires the diameter or thickness of the cable or wire as a key input. This dimension significantly impacts how much can be wound onto the reel.

Whether you need to estimate reel capacity, compute cable weight in water, or check voltage drop, our calculators will deliver fast, accurate results in just a few clicks.

Recommended Working Capacity: An approximate number equal to 80% of Total Working Drum Capacity.
