

MPR-341-2 is a 3-phase digital motor protection relay which monitors phase loss, unbalance, overload, and more. Protects motors with precision with additional protection against Earth Fault.

Motor protection is used to prevent damage to the electrical motor, such as internal faults in the motor. Also external conditions when connecting to the power grid or during use have to be detected and ...

Eaton's Motor Relays (EMR3MP0, EMR3000, EMR4000 and EMR5000) provide unparalleled motor protection. These relays are most commonly applied to medium-voltage or larger motors. Users ...

Find reliable motor protection relay digital display solutions with overload, phase failure, and under voltage protection. Click to explore top-rated, customizable options for industrial use in 2026.

Revolutionary development of motor protection relays Complete motor protection is realized with real time data processing and high precision.

The MachineAlert family of dedicated function motor protection relays offers supplementary protective functions that are easily added to your motor control circuits.

This smart digital relay features an intuitive LCD display, making it easy to monitor and protect your electronic overload relay. With top-notch digital technology and unbeatable reliability, Acrel-ARD3 is ...

A digital motor protection relay is an intelligent protection device that uses microprocessor technology to monitor and protect motors from various electrical faults.

The built-in web server enables secure, remote access to the relay with password protection. You can download status reports or view metering and relay information remotely.
