

The Nichia NUBM08 Laser Diode is a Low Hours (<1500 hours) TO-5 blue emitter with an output power reaching up to 6000mW CW.

Description NICHIA NUBM08 Blue 450nm 38W/8*4.75W Laser Diode LD Bank With PCB Board

The Nichia NUBM08 is known for its superior beam quality, with a high beam intensity and a narrow beam divergence angle. This results in a highly focused laser beam, which is essential for ...

Nichia NUBM08 nubm08.jpg Wavelength: 455nm (blue) Output power: 3.4/3.6/- W Power requirements: Voltage: 3.6/-/4.8 V Current: 280/-/480 mA threshold, 3.5A max Datasheet nubm08.gif.

BeamQ Laser Nichia NUBM08 Laser Module 455nm 38w Blue Laser Diode LD 8*4.75w - High power multiple laser diode (LD) bank 8 collimator ...

The Convoy 17mm 6V/5A boost driver is decent, but it hits peak values and then drops off immediately, and it's not due to heat since just turning On/Off the laser will get peak numbers again ...

It provides comprehensive technical specifications, performance characteristics, and safety information necessary for the successful and safe integration of the NUBM08 laser diode into ...

BeamQ Laser Nichia NUBM08 Laser Module 455nm 38w Blue Laser Diode LD 8*4.75w - High power multiple laser diode (LD) bank 8 collimator beams No outgas High heat dissipation High ...

(In this specification, the blue laser diode bank is referred to as "LD-Bank", and the laser diode with collimator lens mounted on the LD-Bank is referred as "LD";.)

RGB lasers will cut/engrave/mark on materials not reflect light. High output laser stage lighting on DJ, KTV and other stage lightings. Considering the very high output, we strongly recommend buyers use ...

We offer professional ODM and OEM service for laser module. We are a manufacturer of laser modules, also a provider of Laser light source solution that from design to production.
