

Vibration Dampers work to cancel damaging fatigue caused by wind-induced vibration. Most tuned damping devices operate best near their natural frequencies.

The Hubbell spiral vibration damper (SVD) reduces Aeolian vibration on ADSS cable, Conductor, and Shield Wire/OPGW. Aeolian vibration is a high frequency, low amplitude caused by wind passing ...

Vibration dampers are widely used to control aeolian vibration of the ADSS cable and earth wires including optical ground wires (OPGW). When the damper is placed on a vibrating conductor, ...

It is made of high-quality materials with excellent durability and stability, which can effectively reduce the vibration generated by various optical cables during operation, ensuring the stable operation of the ...

The cable damper is a type of shock absorber that is extremely helpful for small diameter transmission lines and high frequency fiber optical cables, which can be easily damaged.

AFL's AVD Series Spiral Vibration Dampers are designed to eliminate the damage caused by Aeolian vibration and reduce overall vibration on bare All-Dielectric Self-Supporting (ADSS) cables.

This damper is especially designed for installation with ADSS fibre optic cables, improving the performance of the conventional stockbridge vibration damper when used with this kind of cables.

Effective spiral vibration dampers to protect ADSS and aerial fiber optic cables from wind-induced fatigue, ensuring long-term reliability.

Vibration Dampers - Conductor vibration induces a relative motion between the clamp and the inertia weights which causes flexure of the steel cable, resulting in dissipation of mechanical energy by ...

The FIBERLIGN Dielectric Damper is a motion control product used to dissipate aeolian vibration that may occur on ADSS cable spans. Using the recommended number of dielectric dampers minimizes ...
