

An optocoupler, also known as photocoupler or opto-isolator, is a device which can transfer an electrical signal across two galvanically-isolated circuits by way of optical coupling.

In this example a PC817 optocoupler is shown isolating a circuit using HCT logic via a 7414 Schmitt inverter gate.

This tutorial gives an introduction to the HY-M154 / 817 optocoupler module. Moreover, a simple application is programmed that shows how to wire and how to program an Arduino when ...

For our demo purposes, we will be using the PC817, a commonly used transistor output optocoupler in electronics. Starting with a brief explanation of the optocoupler, we begin our ...

This learning module covers the concepts, design, and implementation of optocouplers, a light emitting diode integrated with a photodetector in one package to provide electrical insulation ...

In this application, the optocoupler is used to detect the operation of the switch or another type of digital input signal.
