

Today, magnesium-doping of gallium nitride remains the basis for all commercial blue LEDs and laser diodes. In the early 1970s, these devices were too dim for practical use, and research into gallium ...

The Blue Laser Diode The Complete Story Second Updated and Extended Edition With 256 Figures and 61 Tables

In this book the scientific basis of GaN light emitting devices and the physical concept and basic manufacturing technology of these new blue light emitting diodes and laser diodes are ...

For the first time it is possible to produce lasers with various wavelengths, ranging from red through yellow and green to blue, in one substrate material. This fact, together with their high...

As a result, Shuji Nakamura and myself worked many night-sessions over Christmas and New Year 1996/1997, and the first edition of the Blue GaN Laser book was published in January ...

In this book the scientific basis of GaN light emitting devices and the physical concept and basic manufacturing technology of these new blue light emitting diodes and laser diodes are discussed.

For the first time it is possible to produce lasers with various wavelengths, ranging from red through yellow and green to blue, in one substrate material. This fact, together with their high efficiency, ...

The first red LED was created in the 1950s and by the 1960s the pursuit of shorter emission wavelengths had already yielded green LEDs -- but blue devices were lacking.

This document is a book about the development of the blue laser diode. It discusses key players like Shuji Nakamura who were instrumental in developing blue LEDs using InGaN/AlGaN materials.

In the 1980s, all known material systems possessing the necessary properties for blue-light emission had shortcomings, thus negating their utilization in efficient LEDs. Gallium nitride (GaN) ...
