

Browse our products and documents for Square D(TM) I-Line Power Distribution Panelboards - Ideal for service entrance equipment or downstream distribution panels in the electrical system of a large ...

A power distribution unit (PDU) is a device for controlling data center electrical power. The most basic PDUs are large power strips without surge protection. They are designed to provide ...

Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy.

PDUs deliver AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices. The PDU for your needs depends on the ...

The PDU distributes the incoming power to either NEMA or IEC outlets designed to accept power cords from the mounted IT equipment. With varying form factors and functionality, Legrand's line of PDUs ...

Increasing rack power density both in the data center and at the network edge means that reliable power distribution is crucial. Our innovative power distribution units and rack PDUs not only maintain power, ...

Discover the essential components of a power distribution panel and how to select the right panel for your facility's electrical distribution needs.

A power distribution unit, also known as PDU, refers to a device fitted with multiple outputs designed to control and distribute electric power, which is normally used in the racks of networking equipment ...

From residential 100-amp panels to massive 600 amp main distribution panels in commercial facilities, this comprehensive guide will help you understand distribution board types, ...

A panelboard is a component of an electrical distribution system which divides an electrical power feed into branch circuits, while providing a protective circuit breaker or fuse for each circuit, in a common ...
