A liquid-crystal display (LCD) is a flat-panel display or other electronically modulated optical device that uses the light-modulating properties of liquid crystals combined with polarizers to display information.

Think about those events like music festivals or product launches where time is money. They come with lightweight carbon frame constructions, snap together modules that don't require ...

The document describes three intelligent micro-module data center solutions: Fit Atom single cabinet, Fit Array single-row, and Fit Atrix double-row. Fit Atom is a single cabinet solution for small spaces.

A micro-modular data center is a modular data center product that integrates IT cabinets, refrigeration, uninterruptible power supply, fire protection, lighting, monitoring, wiring, security and ...

Micro-scale LED structure for high efficiency micro LED displays that allows for easy fabrication and packaging. The LED structure has a distributed Bragg reflector (DBR) in the ...

The performance of an LED display screen depends on the coordination between the LED module and LED cabinet. This article clearly explains their definitions, functions, and ...

The Intelligent Micro Module combines sensor and Big Data analysis techniques, and changes traditional fault maintenance into failure prediction and proactive maintenance.

The LED display cabinet is the physical structure that houses LED modules, receiving cards, and wiring. It gives the screen shape and strength while protecting internal parts from dust, ...

A micro-module rack is far more than a standard server rack. It is a fully integrated data center unit that combines racks, power distribution, cooling, monitoring, and cabling within a ...

A micro-modular data center is a modular data center product that integrates IT cabinets, refrigeration, uninterruptible power supply, fire protection, ...
