

When studying electrical protective relays, we often use specific terms. To understand how different protective relays work, it's essential to know these terms. Key terms include: Pick up ...

Protection Coordination Principles Relay coordination is the process of selecting settings that will assure that the relays will operate in a reliable and selective way. In OC relays the coordination is based on ...

To determine stability voltage for through fault V_s " Voltage across the relay at IFS (VS) CT Resistance (RCT)

The documents presented should serve as a model to various utilities in preparing similar documents for setting protection relays installed at 220kV, 400kV and 765kV EHV and UHV transmission ...

For three-terminal lines where the remote station has no breaker-failure protection, set the relay to reach 110% of the sum of the protected line impedance with infeed and the remote line impedance with the ...

With the help of these spreadsheets below, you can make your endless calculations much easier! Contact us for more information and download:

Protection systems are only one of several factors governing power system performance under specified operating and fault conditions. Accordingly, the design of such protection systems must be clearly ...

PSM and TMS Settings are used to specify the tripping limits of a relay when a fault occurs. How to calculate the settings of the relay?

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

Dropdown lists for curve type and conditional formatting for overdue test dates are built in. Use this to document all relay settings in a protection coordination study or as a live maintenance register.

When the protection is implemented using a voltage relay, the selected setting must be equal to or exceed the calculated stabilizing voltage. The value of the stabilizing resistor is determined according ...

A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years.
