

A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years.

Feeder protection, or more exactly protection for overhead lines and cables, is the most commonly used type of protection. The protection has to ensure that the power grid continues to supply energy. In ...

Eaton's Distribution Relays offer complete metering, protection, and control for all voltages in a single compact case to reduce panel space, wiring and overall costs.

This booklet aims at illustrating the basic criteria needed for good protection of machines and plants in medium voltage networks.

The network protector will automatically open when the network system load decreases and automatically close when the network load increases by means of relays.

One unique flexible platform handles analogue, digital, and Ethernet communications with multiple interfaces combined in one unit. The interfaces can be programmed together or independently, ...

This guide was prepared by the WECC Telecommunications and Relay work groups. It gives recommendations to communications system designers for communication circuits that support ...

The SEL-751 Feeder Protection Relay is ideal for directional overcurrent, fault location, arc-flash detection, and high-impedance fault detection applications.

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

Use arc-flash detection cables with SEL-751 and SEL-751A Relays to protect people and equipment from arc-flash events. Safely connect SEL fiber-optic transceivers, ...

Fundamental concepts and terminology will be taught using the electromechanical overcurrent relay as a foundation and then these concepts will be expanded to modern numerical relays.
