

Single-channel fiber optic slip ring connector

Moflon has built FORJ (fiber optic rotary joint) and fiber optic slip ring for over 30 years.

Fiber Optic Rotary Joints (FORJs) are to optical signals what electrical slip rings are to electrical signals, a means to pass signals across rotating interfaces, particularly when transmitting large amounts of data.

Offered in a wide variety of configuration options for varying size, wavelength, environmental, material, and termination requirements, we are your single-source provider for slip ring and FORJ solutions.

Can be combined with the traditional electric slip ring to transmit power and high-speed data.; Safe and reliable, no electromagnetic interference long-distance transmission. Our expert team is here for you!

We are happy to assemble your fibre optic slip rings exactly as they are best suited to your installation situation. This includes cutting the fibre optic cables to any length with millimetre precision.

Easy to Install - Compact design with standard connectors for simple setup. Wide Compatibility - Works with various devices like cameras, motors, and turntables.

It could support 1 channel fiber optics (SM/MM) transmitting on 360° rotating. 1-channel (SM or MM) rotary joints (FORJ) are the most versatile designs the market has ever seen. The rugged body ...

The single-channel fiber-optic rotary couplings of SPINNER feature maximum performance in a minimum of space. It comes in three different standard versions as well as customized solutions.

This 1 channel fiber optic rotary union supports single mode and multi motor, which is applied to devices that need to unlimited, continuous or intermittent rotation and transmit large capacity data or signal ...
