

Upgraded version of remote power supply for rail transit

Urban rail transit plays an important role in reducing road congestion and greatly facilitates travel. Currently, reducing energy consumption and implementing high-quality power supply are...

The monitoring subsystem installed in the equipment can be synchronously integrated into the signal microcomputer monitoring system to realize the closed-loop management of the power supply...

Result & Conclusion The DC remote power supply technology can meet the power supply demand for long distance section of urban rapid transit lines, and a single point failure will not cause interruption ...

AEG PS provides the power solutions of choice for such demanding applications as of-shore oil and gas platforms, non-stop industrial processes, nuclear power plants, renewable energy generation, rail ...

This paper reviews the status and the development of rail transit power supply technology, and introduces a new challenging technology--inductive power transfer (IPT) technology ...

Smart Upgrade and Update refer to flexible and sustainable solutions provided by ABB to renew and modernize existing low-voltage electrical distribution systems without the need for ...

Our power supply solutions and signalling systems for the CRL will enable LTA to connect the physical rail infrastructure with the digital world, gaining more value through integrated ...

With know-how, process expertise and systems and products developed and manufactured in-house, Rail Power Systems covers the entire spectrum - from the initial enquiry to systems design through ...

Based on these insights, reflections on the future development of DC and AC traction power supply technologies are presented, respectively, from the demands for environmental sustainability, low ...

Hitachi Energy offers flexible extension modules that used in all product lines to provide additional and extended functionality in Power supply units.

Upgraded version of remote power supply for rail transit
