

# What is the voltage of the high-voltage signal bus SYM

When data is being transmitted, the GMLAN-High signal circuit is driven higher to about three-point-five volts and the GMLAN-Low signal circuit is driven lower to about one-point-five volts.

Modules may be placed in slots of the chassis, wherein each module may connect through a connector to one or both of the low voltage analog bus and the high voltage analog bus. The high...

In this video, you will learn 4 symptoms of a bad or failing engine control module. Watching this video will help you diagnose to see if it's time to replace your engine control module. This video...

What is the high-voltage bus? The high-voltage bus or DC bus is a core concept in electric cars: It is one big parallel connection where the suppliers and consumers of power are connected. It is also present ...

Students will disable the high voltage system, disassemble the component that serves as the high voltage distribution center, defeat the interlock circuit (if necessary), and measure bus voltage with a ...

What should I do if my SYM scooter overheats? If your SYM scooter engine overheats, it could be due to: Piston and cylinder being worn out. A lean mixture. Poor fuel quality. Too much carbon deposited ...

The HVIL loop passes through all high-voltage components in the vehicle. In the automotive industry, voltages above 60V are considered high-voltage.

To wake the control modules connected to the low speed GMLAN serial data bus, a high voltage wake up pulse is sent out over the bus, the voltage level of the pulse is +10 volts.

The signal has an amplitude of about 15 V dc as it swings from low to high. It floats on a dc bus voltage of about 465 V. The blue trace is the same signal acquired with a Teledyne LeCroy ...

What should I do if my SYM scooter overheats? If your SYM scooter engine overheats, it could be due to: Piston and cylinder being worn out. A lean mixture. ...

On Bus: The bus to which the high voltage breaker connects, which must already exist on the one-line. For your reference, the On Bus base kV is displayed next to the bus name.
