A: The maximum power output for the PoE ports on the Xike Gigabit Switch varies depending on the model. For the 5-port model, it provides up to 60W total power budget.

Only initial testing so far, but working well. The only thing of mention is a "blip" in network traffic for around 30 seconds, but I couldn't confirm if it was the switch or not, so giving it the benefit of the doubt.

Efficient Power Management: The 2.5g managed poe switch supports intelligent power distribution, automatically detecting powered devices and supplying power accordingly. It ensures that non ...
